Fallen Log

STAGE 1

Prepare a suitable location for your new fountain such that the front can be seen and enjoyed while the back side is somewhat hidden but accessible for servicing needs.

STAGE 2

Before setting the fountain into any location which may be hard to reach later, follow these pre-assembly directions:

Thread the two larger barbed adapters (15-248H) into the couplings cast in the back of the fountain. Mount the two shorter tubes to the adapters. Connect these tubes together using the tee, as shown. Add the longer, remaining tube to the perpendicular leg of the tee.

STAGE 3

Place the pump in the basin. Thread the pump adapter into the top of the pump and attach the tube to the adapter.

STAGE 4

The fountain includes a light (AB871L). Set the light into the right side of the front basin and aim the light beam back towards both waterfall areas. Slip the light cord through the access hole in the centre of the basin. Pull all excess cord into the back of the fountain.

STAGE 5

Move the fountain into the final position. Pull the pump and light cords out of the back.

STAGE 6

Fill the pool with water. Read your pump instructions. Then, plug your pump into a GFCI protected circuit. Connect the light cord to the provided light transformer and also plug into a GFCI protected circuit. (Both pump and light can work on the same circuit). Enjoy your new Henri fountain.

IMPORTANT - WINTER CARE

Winter ice build-up can cause damage to concrete statuary. Follow these tips to reduce winter weathering to your fountain:

- Disconnect power to pumps.
- Remove adapter from bottom bowl to open drains and let all moisture out. Keep drains open throughout winter.
- Place an absorbant material like burlap, blankets etc inside vases/bowls and cover all with a fountain cover.
- Do not allow snow or ice to build up on or against the concrete. Remove snow before it turns to ice. Do not use salt or chemical ice removers as these may damage concrete.

ADVISORY NOTICE HEAVY ITEMS!

Please take care when handling these items
