

## H5321F2BRO

# Tall Sunflower Bubbler Fountain

### STAGE 1

Prepare a suitable location for your new fountain. The fountain should sit on a firm and level pad. Set the 5321CRO Pedestal in place.

### STAGE 2

Place 5321BRO Basin onto Pedestal.

### STAGE 3

Securely slip one end of the wider tubing over the barbed attachment under the AB870 light. Push the threaded end of the 15-45H barbed into the other end of the same tube. Then push one end of the smaller tube over the barbed end of the adapter. Insert this tube assembly and light power cord together down through the top hole of 5321ARO Top. The AB870 light should fit snug in the centre hole of the 5321ARO Top.

### STAGE 4

Place the restrictor in the middle of the smaller tube, tightening just enough to hold it in place.

### STAGE 5

Push the small pump exhaust fitting into the top of the pump. Then push the open end of the tube over the exhaust fitting.

### STAGE 6

Place the rubber stopper on the pump cord about 10" from the pump body. The larger end of the stopper should be closest to the pump. Then, insert the power cord from the light into the stopper's other hole.

### STAGE 7

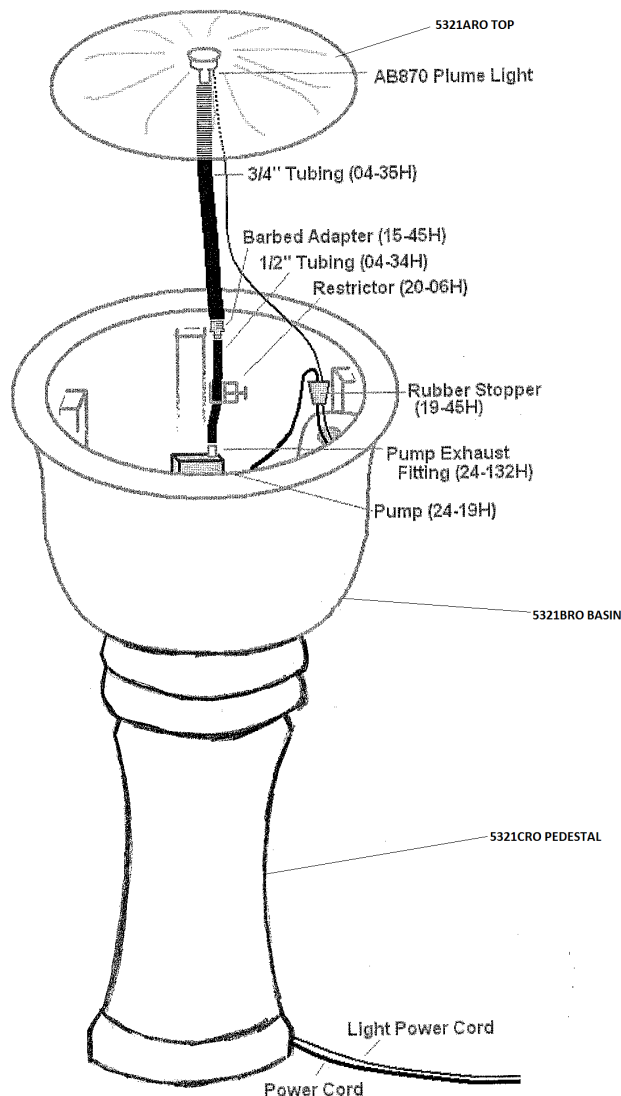

Slowly place the Top in place in the Basin. As you do, guide the two power cords down through the centre hole. With the help of another person to hold items in place, tip the whole fountain back just enough to reach underneath and pull loose cords out access hole.

### STAGE 8

Make sure the pump is sitting down in the lowest part of the Basin. Push the rubber stopper firmly in place to create a watertight seal. Fill the Basin unit with water about 1" from the top.

### STAGE 9

Connect the light power cord to the transformer provided and plug in the transformer and pump to enjoy your fountain.

### IMPORTANT - WINTER CARE

Winter Ice build-up can cause damage to concrete statuary. Follow these tips to reduce winter weathering to your fountain:

- Disconnect power to pumps.
- Remove adapter from bottom bowl to open drains and let all moisture out. Keep drains open throughout winter.
- Place an absorbant material like burlap, blankets etc inside vases/bowls and cover all with a fountain cover.
- Do not allow snow or ice to build up on or against the concrete. Remove snow before it turns to ice. Do not use salt or chemical ice removers as these may damage concrete.

## ADVISORY NOTICE HEAVY ITEMS!

Please take care when  
handling these items
