

Aluminium Furniture

Aluminium is a strong yet light material that does not corrode or rust making it ideal for outdoor furniture and benefits from being easy to move in use.

Our aluminium furniture is pre-washed, etch primed and electrostatically powder coated for an optimum, even cover before being baked in an oven to fix the finish. This process prevents oxidation and gives an attractive, hard wearing surface and the possibility to offer varied colour themes.

Care

We supply a care product to keep your aluminium furniture looking its best. You will find details of this product under the tab **Additional – Care Products**.
