Your Warranty

Your water feature and components are guaranteed for 12 months against a manufacturing defect only. Please ensure you retain your proof of purchase so that any warranty claim can be processed efficiently.

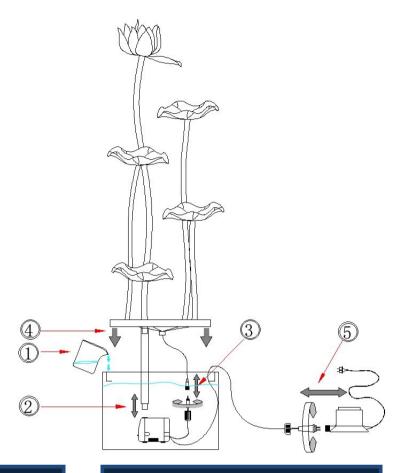

This Water Feature and its parts will NOT be covered under warranty if: -

- If your water feature has been cleaned using an abrasive substance or has been exposed to continuous algae and / or lime scale build-up
- The water feature pump is allowed to operate without water causing it to burn-out or has any visible signs of algae or lime-scale build-up.
- Any form of discolouration that resembles rust.
- Any physical damage to the water feature, pump, transformer, lights, wiring, fittings or mains plug.
- Your water feature has been exposed to severe weather conditions.
- Products that have formed cracks / leaks not reported within 28 days from purchase.

Please be aware you will be asked for proof of purchase.

If your proof of purchase is not available replacement parts can be purchased from leading retailers or Hamac Trading directly

Product code: PWFMT428T

- 1. Connect clear pipe from top section to pump
- Connect your LED light to the lead coming from the pump
- 3. Fill water feature with water, until the pump is fully submersed. Do not run the pump unless in water
- 4. Plug the transformer & pump into a power supply and switch on
- 5. Your water feature will start to flow, this can take a couple of minutes to flow correctly

Troubleshooting

- Check the water level is covering the pump by at least 5cm.
- Check the flow dial (model dependant) on the pump to ensure the correct flow rate.
- Check that all connections are firmly secured
- Turn off power and clear the pipe and impeller from blockages.
- Check the fuse in the plug.
- If the lights (model dependant) and the pump are not working, the transformer may have failed. If the water feature is within warranty and has not been damaged due to misuse a replacement part will be offered.
- If the water feature lights (model dependant) stop working, new lighting systems are available to purchase from your nearest retailer or Hamac Trading directly.
- If the water feature lights are still working and the water is not flowing, the pump may have failed. If the water feature is within warranty and has not been damaged due to misuse a replacement part will be offered.
- For consistency of water flow, please ensure your water feature is placed on a level base.
- Water evaporation is a result of weather conditions, ensure your water feature is topped-up on a regular basis.
- If any parts are missing or if your water feature is damaged, please contact your stockist as soon as possible.

Winter Care Advice

- During the winter period we recommend that you empty the feature of water and store in a sheltered location, e.g. a garden shed or garage.
- Remove the pump and clean. Store in a dry, frost-free location.
- Drain the water feature. If your water feature is not drained, water WILL freeze causing cracking, leaks and paint to peel.

If you do not remove your water feature from its outdoor location:

An Aqua Flo water feature cover can be purchased from your nearest retailer or Hamac Trading directly.

NB. Please also follow the above winter care advice.

Cleaning your Water Feature

For your continued enjoyment and pleasure, your water feature will require regular maintenance and cleaning.

- Please disconnect from mains supply before performing any maintenance or cleaning.
- Always ensure your water features reservoir is kept topped up with clean water.
- Always remove garden debris and algae from the water feature
- Aqua Flo water feature maintenance products are available to purchase from your nearest retailer or Hamac Trading directly.
